

VOLT® Line Voltage Landscape Lighting

VPL-1040-L-BBZ- The Rotunda 120V Bollard Series

Product Description

The Rotunda bollard by VOLT® is a solid brass high quality commercial product made to guide walkways or high traffic areas. It features a 6 louver construction along with a recessed bulb socket that is designed to completely block from glare; while still producing an incredible spread of light. At 40 inches tall, these fixtures are not only solid, but robust. The height is what allows for very wide spread illumination. These come with a surface mount that allows you to mount directly to a surface. You can also utilize the included feet that attach to the surface which allow for a direct concrete pour if you choose to do so. Because these products are 120VAC, they do require a licensed electrician for installation. Be sure to check your local codes before installation for information on how connections and conduit needs to be laid out.

Product Dimensions

Specifications

- ▶ **Construction:** Brass
- ▶ **Finish:** Bronze
- ▶ **Lead Wire:** 16 AWG Wire
- ▶ **Light Source:** E26 socket, PAR30 Bulb
